DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1 and 5, drawn to An Encoder with motion detector and Multiplexer, classified in class 375, subclass 240.13.
 - II. Claim 2 and 6, drawn to a bitstream converter with a decimation controller and bitstream decimator, classified in class 375, subclass 240.16.
 - III. Claims 3,4,7,8, drawn to a bitstream multiplexing apparatus with a virtual buffer,Multiplexer, decimation controller..., classified in class 375, subclass 240.01.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions of groups I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claims of group III does not include intra picture coding or unidirectional coding or bi directional encoders that appears in group I. Group III also does not have a motion detector required by the claims of Group II.
- 3. Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Groups I and II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
